UNIT- IV

21	October	12	Direct and Diverse proportion	3	Quantities and their properties in inverse variation and based on some properties order to stabilize how one quantity is related to another quantity	Number of workers and time taken to complete the work the real life example to show student	What is direct and diverse proportion explain with example
22	October	18	Area of a Trapezium and a Polygon	4	identify the bases, legs, and height of a trapezoid, derive the formula for the area of a trapezoid given the base lengths and height, use the formula involving the base lengths (including the middle base) and the height of the trapezoid in order to find areas of given trapezoids,	Show the activity of area of a Trapezium	What is the formula for the area of a Trapezium draw on chart paper
23	November	22	Introduction to coordinate Geometry	2	Student are able to draw points and lines after that graphs are use in different types of figure and the figure is relate to 3D 2D and quadrilaterals form and parallelograms formed also	The coordinates of the flight are used to describe the aircraft current location is the real life example of co-ordinate geometry	Describe the link between geometry and algebra through graphs involving curves and lines

ANNUAL EXAMINATION

24		8	Linear Equation				
25		11	Compound Interest				

26		12	Direct and inverse proportion				
27		13	Time and work	3	Calculate and find the time required to complete a piece of work and also find work done in a given period of time. We know the amount of work done by a person varies directly with the time taken by him to complete the work.	Proportionality, efficiency, hours, speed	How many types of questions are there in time and work
28	January	18	Area of a Trapezium and a Polygon				
29	November	20	Volume and surface area of solid	4	Upon completion of this lesson, students will be able to: define surface area. Outline the various formulas for calculating surface area. calculate the surface area of assorted objects.	Surface area can be used to calculate things like the area of outside of machine	What are the real life applications of surface area and volume
30	December	21	Data Handling	2	Through the study of data handling, the learner develops the skills to collect, organise, display, analyse and interpret this information.	Encourage them to find out their own information and show them how to record this accurately be it in a list table or Tally chart	To collect the set of data and presenting in a different form
31	December	22	Introduction to coordinate Geometry				
32	December	23	Line graphs and Linear Graphs	2	All students should be able to construct a line graph given scaled axes. Most students should be able to construct and interpret a line graph to identify trends over time. Some students should be able to use a line graph to compare two data sets over time.	Provide structure in assessing performance sales and event deadlines	What is the difference between a linear graph and line graph
33	December	24	Pie Charts	2	Explain how pie charts are used to present information. List the characteristics of a pie chart. Interpret data presented in pie charts. Explain the	Explanation a type of graph that represent the data in the	How do you explain a pie chart in a representation

					process used to create pie charts.	circular graph	explain
34	December	25	Probability	2	<p>Explain the concept of probability.</p> <p>Calculate the probability of simple events.</p> <p>Calculate the probability of compound events.</p> <p>Calculate the probability of complementary events.</p>	<p>To show the probability of getting ahead when a coin is toss is equal to $1/2$</p>	<p>What are the four types of probability</p>
